LIBRARY MANAGEMENT SYSTEM

Presented By:

OMAR KHALIL AL-ZOUBI

AHMAD KHAIR IBRAHIM

AMR ABU-SALEH

MOHAMMED ALI ALEER

The Scenario :

The project talks about borrowing a book from a library, where the user enters the system, logs in, then searches for the book, then checks the copy if it is available. The borrowing process is completed, and if it is not, he reserves this copy and can make suggestions on a copy, either As for the librarian, he is responsible for adding titles, as well as creating an account for him and the user, blocking the user, and sending notifications to the user when a new book is available or a reserved copy is made available. He can view the reports submitted by the user on the books. As for the copy class, he is responsible for searching for a copy, canceling the copy, verifying its availability, and teaching... Release

When reserved, returned, or borrowed, the Address manages the addresses, displays its information, and displays its monetary value, The reservation manages reservations and verifies the reservation of a title, and the lending manages loans and verifies the loan of a copy.
